

**POSITIVE FUNCTIONS OF ECCENTRIC CONTRACTION AND WAYS OF CREATING ECCENTRIC
CONTRACTION PROGRAMS FOR A SPECIFIC INDIVIDUAL MUSCLE**

**Spring 2025 workshop
taught by Irene Dowd
in collaboration with Stephen Williams
Saturday, March 8, 2025
2:30 – 4:30 PM**

Eccentric contraction is activation of a muscle while it is elongating, such as lowering our spoon slowly into our soup by eccentrically contracting the muscles that cross the front of our elbow. Eccentric contraction has many benefits including: decreasing spasticity due to some neurological conditions, building strength more efficiently and quickly, increasing control and decreasing impact when landing from jump/running/walking, recovering from muscle injury, increasing bone building, enhancing muscle awareness, and more. We will learn how to create personal programs of utilizing and enhancing eccentric contraction of each and any muscle of our body, without involving special equipment or settings.
